

ABSTRACT

It is to provide a material to inhibit spine/spinal cord adhesion in the form of a sponge, a film or a suspension to be used for the purpose of

5 assisting/accelerating the tissue healing. An adhesion inhibiting material for a spine/spinal cord surgery in the form of a sponge, a film or a suspension to be used for reducing the degree of adhesion or for inhibiting adhesion caused by a spine/spinal cord surgery, which

10 contains a crosslinked acid polysaccharide.
